“From Soil To Sea, Keep It Pollution Free”

No one practice can solve all issues related to **stormwater runoff**. The important thing to remember is that every effort helps! Any practices you follow at home will have a positive impact on water quality and will benefit you and the environment.

Only Rain Down the Drain!

“From Soil To Sea, Keep It Pollution Free”

Stormwater runoff is precipitation from rain or snowmelt that flows over the ground. As it flows, it can pick up debris, chemicals, dirt, and other pollutants and deposit them into a storm sewer or waterbody. Anything that enters a storm sewer flows untreated into the waterbodies we use for swimming, fishing, and drinking water. Only 1% of our water is usable, drinkable water. We can not afford to pollute and contaminate it.

Cover the ground with mulch or groundcover. Native plants have deep roots to hold the soil in place and soak up stormwater. Add compost because organic matter is important to the living structure of soil - it feeds the microbes. They are essential for healthy soil.

Healthy living soil absorbs more water and reduces stormwater. With increased infiltration, it reduces flooding and allows the water to infiltrate into the soil and remove any potential pollutants before it reaches our water ways.

Remember, Only Rain Down the Drain!

Use pesticides sparingly. Fertilize only as needed using natural, organic, or other slow release fertilizers. Do not apply them if it is supposed to rain. Sweep grass clippings, leaves, and dirt back into the yard.

Fluids in your car can be extremely toxic. Fix leaks so children and pets are not exposed to toxic puddles or toxic fluids that could be ingested. If you change your own oil, use a drip tray and take used oil, filters, and batteries to an automotive store for recycling– most will accept these items. Go to a commercial car wash where the water is treated before going down the drain, reducing potential pollutants. If you wash it yourself, do so on the lawn.

Properly dispose of leaves and grass clippings. Start a compost pile. Never use streams, creeks, or gutters to dispose of yard waste. Sweep the dirt and debris from your driveway and walkways back into the yard.

Pick up pet waste from your lawn and dispose of it in the toilet or trash. Hosing dirt and pet waste into storm drains sends it directly to the creeks and rivers. Please dispose of all trash in the proper place. Do **NOT** litter!
