STARK COUNTY CRASH REPORT

Introduction

One of the primary objectives of the SCATS planning effort is to improve the safety of the existing highway system. To do so, it is necessary to have a means of identifying high-crash locations to concentrate efforts on these locations. The total number of crashes in 2024 was 8,389.

The purpose of this report is to summarize accidents that occurred in the SCATS area during the years 2022, 2023, and 2024 to identify locations with high crash rates and to provide a regional ranking of hazardous locations. This ranking is based on the number, rate (crashes per million vehicles or vehicle-miles), and severity of accidents at each location.

The report is divided into five sections. The first section is this introduction. The next section reviews the source of data used, the third section describes the methodology used to develop the rankings, and the fourth section summarizes this analysis. At the end of this report is an appendix that lists all locations with a history of accidents within the communities of Stark County.

Source of Data

SCATS has access to the Ohio Department of Transportation's (ODOT's) online Crash Analysis (GCAT) Tool. The GCAT Tool is a geographic interface that maps all reported crashes in Ohio and links the crash details to each crash point.

Coordinating with Other Agencies

Every year, SCATS identifies accidents at intersections to determine whether additional intersections should be added to the listing based on having three or more crashes within a year. SCATS then confers with the County Engineer, ODOT, and the other agencies on these intersections to determine the reason for increased accidents. Within cities, the city engineers' offices, safety offices, and the city police departments are also consulted.

For non-intersection crashes, SCATS uses its count stations as a base of locations to monitor crashes. This was done because SCATS traffic counts cover all of the major roads in the county, there is traffic volume data readily available for these locations, and it is possible to utilize geographic information systems (GIS) to link the crash data to these locations.

The listing used by SCATS may not always agree with other listings due to differences of definitions and terminology.

Data Used

The following data for arterial and collector streets is included:

1. Total number of crashes in each of the last three years
2. Total number of possible-injury crashes for the last three years
3. Total number of non-incapacitating-injury crashes for the last three years
4. Total number of incapacitating-injury crashes for the last three years
5. Total number of fatal crashes for the last three years
6. Section traffic volumes
7. Intersection approach volumes
8. Three-year crash rate per million vehicle miles
9. Three-year crash rate per million approach vehicles
10. Severity index
11. Composite three-year crash ranking

The data is summarized by political unit, street name, and intersecting street.

Methodology

SCATS identifies high crash intersections by means of a hazard rating. The hazard rating was developed by the SCATS staff a number of years ago to combine the rates of crashes per year, crashes per million vehicles, and the severity index into one numerical measure. The following formula was developed:

$$HR = 10 \left(\frac{\text{crash} / \text{year}}{15} \times \frac{\text{crash}}{MV} \times SI \right)$$

Where:

- HR = Hazard Rating
- MV = Million Vehicles
- SI = Severity Index

For non-intersections, the formula is simplified to the following:

$$HR = \frac{\text{crash}}{MVM} \times SI$$

Where MVM = Million Vehicle-Miles.

In order to be listed among the top-rated locations, a section has to have at least ten crashes over a three-year period. Sections with fewer than ten crashes are still listed in the appendix, however.

The Severity Index is calculated by multiplying the number of fatal crashes by twelve, the number of incapacitating-injury crashes by nine, the number of non-incapacitating-injury crashes by four, the number of possible-injury crashes by three, and the number of property-damage-only crashes by one. The above products are then summed and divided by the total number of crashes. The severity index value ranges from 1.00 for only property-damage crashes to 9.00 or higher if many crashes involve incapacitating injuries or a fatal crash occurs. The formula is as shown below:

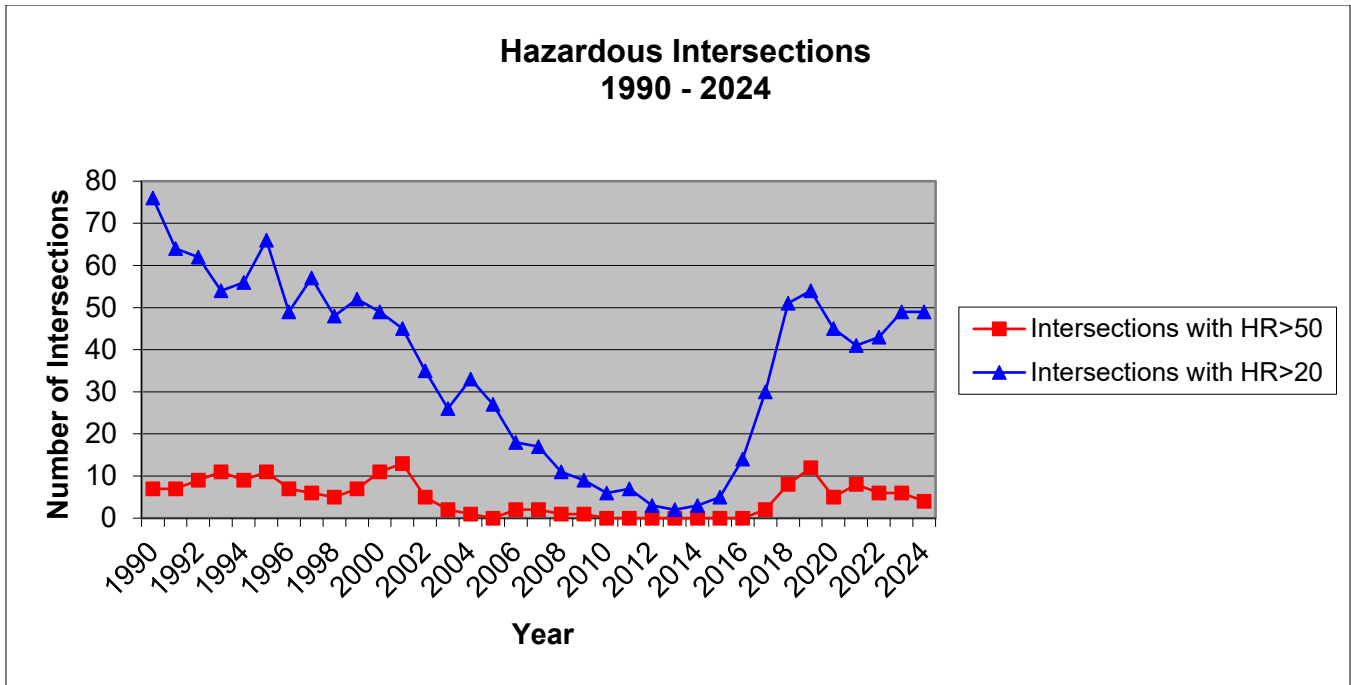

$$SI = \frac{(12 \times FC) + (9 \times IIC) + (4 \times NIC) + (3 \times PIC) + PDC}{FC + IIC + NIC + PIC + PDC}$$

Where:

- FC = Fatal Crashes
- IIC = Incapacitating Injury Crashes
- NIC = Non-incapacitating Injury Crashes
- PIC = Possible Injury Crashes
- PDC = Property Damage only Crashes

In the Hazard Rating formula, the value of crashes/year is limited to a **range between 0 and 22.5 crashes per year**. In past reporting years, a maximum value of crash/year equal to 13.5 was used in the Hazard Rating formula. However, this value often produced a Hazard Rating value that was inconsistent with the opinions of agencies responsible for maintaining the intersection. Therefore, the maximum value of crashes per year was increased to 22.5.

Hazard Ratings range from 0 for locations with no crashes to greater than 100 for locations with high crash rates and high severity indices. SCATS considers locations with a Hazard Rating of over 20 to be in need of a crash pattern analysis. Locations with a rating over 50 are definite candidates for improvement. In 2001, there were 12 locations with a Hazard Rating greater than 50 and 52 locations with a Hazard Rating greater than 20. In 2024, there were 4 locations with a Hazard Rating greater than 50 and 46 locations with a Hazard Rating greater than 20. In 2016, the Severity Index formula was changed to account for new information available on incapacitating-injury crashes. This change caused the severity indices to increase by nearly 20%, which accounts for the rise of the blue and red lines in the chart below which shows how the number of hazardous intersections has been declining since 1990.

Performance Measures

One of the requirements of the federal transportation bill is to keep track of certain performance measures and show improvement year-to-year in those areas. The Ohio Department of Transportation has selected the following performance measures in the area of roadway safety:

1. Number of fatalities: decrease by 2% each year
2. Number of serious injuries: decrease by 2% each year
3. Rate of fatalities per 100 million vehicle miles traveled: decrease by 2% each year
4. Rate of serious injuries per 100 million vehicle miles traveled: decrease by 2% each year
5. Number of non-motorized fatalities and serious injuries: decrease by 2% each year

The following table shows how these performance measures have been trending in Stark County:

Stark County Safety Performance Measures					
YEAR	FATALITIES	SERIOUS INJURIES	FATALITY RATE (per 100 Million VMT)	SERIOUS INJURY RATE (per 100 Million VMT)	NON-MOTORIZED FATALITIES & SERIOUS INJURIES
2012	31	227	0.99	7.22	28
2013	26	199	0.82	6.29	24
2014	44	247	1.40	7.84	25
2015	20	210	0.59	6.18	16
2016	32	226	0.97	6.85	15
2017	33	210	0.97	6.19	29
2018	36	203	1.21	6.83	30
2019	29	177	0.97	5.94	19
2020	31	167	1.04	5.61	24
2021	39	185	1.38	6.53	21
2022	30	152	1.06	5.35	21
2023	20	172	0.69	5.93	23
2024	29	193	0.99	6.59	26

For these calculations, yearly vehicle miles traveled are based on data provided by ODOT at <https://www.transportation.ohio.gov/wps/portal/gov/odot/programs/technical-services/traffic-monitoring/dvmt>.

Descriptions of Top-10 Intersections

The following paragraphs describe the situations at the intersections with the top-10 Hazard Ratings, plans (if any) for improvement that are already scheduled, and SCATS recommendations for improvements.

SR 173 & Paris Ave – This is an intersection of rural two-lane roads controlled by stop signs on Paris Ave. There is a significant skew angle, and there is a slight hill to the east.

Hazard Rating	Crashes per year			Serious Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2022	2023	2024					
56.22	11	6	5	2	0	5,540	3.62	3.32

Fatalities: 0

Leading Cause(s): Failure to yield (60%)

Recent Improvements: None

Current Plans: A roundabout is planned for 2028.

Recommendation: Proceed with current plans.

15th Street Northeast & Walnut Avenue – This is an intersection of two city streets. Walnut Avenue is a one-way street southbound. The intersection is controlled by stop signs on 15th Street. There are site distance-problems looking to the north.

Hazard Rating	Crashes per year			Serious Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2022	2023	2024					
57.27	5	8	8	0	0	2,900	6.61	1.86

Fatalities: 0

Leading Cause(s): Ran stop sign (71%)

Recent Improvements: A lot the obstructions were cleared in late 2023/early 2024.

Current Plans: None

Recommendation: Look at other low-cost improvements, such as improved lighting and warning signs.

Dressler Rd & Everhard Rd – This is a complicated intersection of two five-to-six lane county roads. It is controlled by traffic signals. The north, south, and east legs have left-turn lanes. The east leg has separate left and right-turn lanes.

Hazard Rating	Crashes per year			Serious Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2022	2023	2024					
55.20	38	28	20	0	0	31,250	2.51	1.47

Fatalities: 0

Leading Cause(s): Following too closely (25%) and failure to yield (20%)

Recent Improvements: None

Current Plans: This intersection is currently being upgraded as part of a larger corridor project.

Recommendation: The 1.47 severity index indicates that these crashes are not particularly serious. We would like to see the crash rate under 2.00, but this location gets a high hazard rating because of the high traffic volumes. The current project should improve safety.

US-62 & Harmont Ave & Lesh St – This is an intersection of a four-lane US route and a two-lane county route. Because Lesh St intersects so closely to the main intersection, it has been included as part of this intersection. US-62 has both left-turn-only and right-turn-only lanes in both directions. Harmont Ave has left-turn lanes in both directions.

North ➡

Hazard Rating	Crashes per year			Serious Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2022	2023	2024					
50.65	26	34	30	0	0	38.920	2.11	1.60

Fatalities: 0

Primary Cause(s): Failure to yield (38%) and ran red light (30%)

Recent Improvements: None

Current Plans: This intersection was recently studied as a local planning study funded by SCATS. The study recommended eliminating the intersections at Lesh St/Commercial Dr and the intersection with Lesh St north of US-62. Long-term, the best counter measure would be to build an interchange.

Recommendation: Proceed with current plans.

Everhard Rd & Whipple Ave – This is an intersection of two county roads controlled by traffic lights. Each leg has left-turn lanes and right-turn lanes. The south leg has double left-turn lanes. Traffic from the I-77 offramp is forced to make a right turn at the intersection.

Hazard Rating	Crashes per year			Serious Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2022	2023	2024					
46.63	20	28	25	1	1	38,750	1.72	1.81

Fatalities: 1

Leading Cause(s): Following too closely (28%) and improper start (24%)

Recent Improvements: This intersection was improved in 2020. Traffic from the ramp is now forced to turn right, the left-turn lanes are offset, and the south leg has double left-turn lanes.

Current Plans: None

Recommendation: Prior to the improvements, this intersection would get 50-plus crashes per year. This will always be a high-crash location because of the high traffic volumes.

13th/12th St NW & I-77 NB Ramps/Timken Mercy Driveway –

This is a complicated intersection of a city street, an interstate offramp, and a city street leading to an interstate onramp and a hospital driveway. The hospital can bring drivers that are not familiar with the area. The west leg has double left-turn lanes. The east leg has one through lane and one right-turn lane. The north leg has one left-turn lane and one right-turn lane. The south leg is one-way with one through lane, one left-turn lane, and one right turn lane. It is controlled by traffic signals.

Hazard Rating	Crashes per year			Serious Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2022	2023	2024					
46.40	20	26	16	0	0	22,490	2.52	1.34

Fatalities: 0

Leading Cause(s): Failure to yield (38%) and improper turn (19%)

Recent Improvements: The double left-turn lanes were added in 2022. The signals were upgraded at the same time.

Current Plans: None

Recommendation: The severity index is very low, so the crashes at this location are relatively minor. The crash rate is quite high, but the crashes decreased by 10 in 2024. The increase in crashes in 2023 may have been caused by drivers not being familiar with the new intersection layout. This intersection should be monitored for crash increases in the future.

SR 172 (Tuscarawas St) & Perry Dr – This is an intersection of a state route and a county route in Perry Township. It is controlled by traffic signals. There are left-turn lanes in each direction.

Hazard Rating	Crashes per year			Serious Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2022	2023	2024					
41.49	20	16	19	2	0	28,500	1.76	1.93

Fatalities: 0

Leading Cause(s): Other/Unknown action (50%)

Recent Improvements: This intersection has had several improvements since 2022. These plans included adding right-turn lanes to SR 172 and widening Perry Drive.

Current Plans: The recent improvements should reduce crashes at this intersection

Recommendation: Proceed with current plans

SR 687 & Blackburn Hills & Dales — This is an intersection of a state route, a county road, and a township road at very unusual angles. It is controlled by traffic signals. The NW leg has a left-turn lane. The NE leg has a right-turn lane and a through-left lane. The SE leg has a right-through lane, left-through lane, and a left-turn lane.

Hazard Rating	Crashes per year			Serious Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2022	2023	2024					
41.26	10	13	27	1	0	20,400	2.24	1.66

Fatalities: 0

Leading Cause(s): Failure to yield (89%)

Recent Improvements: None

Current Plans: None

Recommendation: This has not been a problem area in the past, but crashes doubled in 2024. The serious injury crash is concerning, as this should not be a high-speed location. This is being considered as a possible future study area.

12th St NW & Whipple Ave – This is an intersection of a two county roads controlled by traffic lights. There are left-turn lanes on each leg.

Hazard Rating	Crashes per year			Serious Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2022	2023	2024					
40.45	19	17	15	1	0	26,850	1.73	2.06

Fatalities: 0

Leading Cause(s): Failure to yield (80%)

Recent Improvements: Resurfacing

Current Plans: None

Recommendation: Look at short term measures, such as modifying traffic signal timing.

Frank Avenue & Portage Street – This is an intersection of two five-lane county roads. Each leg has a left-turn lane. The north and east legs also have right-turn lanes. The east leg also has double left-turn lanes.

Hazard Rating	Crashes per year			Serious Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2022	2023	2024					
40.15	28	18	15	1	0	32,350	1.72	1.72

Fatalities: 0

Leading Cause(s): Following too closely (33%)

Recent Improvements: In 2022, Portage St was widened, and the signals were coordinated. At the same time, the dual left-turn lanes and the right-turn lane were added westbound. The west leg was widened to offset its left-turn lane.

Current Plans: None

Recommendation: While the serious-injury crash is concerning, the crash rate and severity index are both low. This intersection has a high hazard rating because of the high traffic volumes. Crashes have decreased since the improvements in 2022. Nothing is recommended at this time.

Table 2 - Intersections Ranked by Crashes Per Million Vehicles

Street	Intersecting Street	Crashes by year			3 Year Totals					Avg Daily Traffic	Severity Index	Crash Rate per Million Vehicles	SCATS Hazard Rating	Jurisdiction

Glossary of Terms

Alcohol Related Crash: A crash in which a vehicle driver or pedestrian had been drinking

At-Fault: A term that identifies the person, animal, or condition that was the primary cause of a vehicle crash.

Crash: An occurrence involving a moving motor vehicle, which produces bodily injury or property damage. Crashes are generally caused by driver error, a defect in the vehicle or in the road pavement. It occurs on a road, or after the motor vehicle runs off the road, but before events are stabilized.

Drinking Driver or Pedestrian: A person identified as one who had been drinking at the time of the crash regardless of the level of impairment.

Driver: Any person of any age operating a vehicle, including non-motorized vehicles.

Economic Loss: An estimate of the cost of traffic crashes. Cost estimates for crashes and injuries of various severity are based upon lost wages, medical costs, and vehicle repair costs. These estimates are established from national statistics.

Fatality vs. Fatal Crash: A fatality is a death that results from a traffic crash. A fatal crash is a motor vehicle crash (single or multiple) that results in the death of one or more people. A fatal crash can cause one or more fatalities.

Injury (motor vehicle related): The reporting officer classifies Personal injuries as follows:

Fatality – an injury that results in death within 30 days after the date of the crash.

Serious visible injury – An injury other than a fatality that prevents the injured person from continuing the normal activities he/she was capable of performing prior to the crash.

Minor visible injury – An injury, other than a fatality or serious injury, which is evident to the observer at the crash scene.

No visible injury – An injury that is not evident to the observer, but is claimed by the person, or suspected because of behavior.

Motor Vehicle: Any self-propelled vehicle that does not run on rails. Examples include, but are not limited to, automobiles, trucks, tractor-trailers, and motorcycles.

Property Damage Crash: A traffic crash that results in no injuries or fatalities. Ohio law requires that all crashes resulting in more than \$150 in damage be reported to the Ohio Department of Highway Safety on the OH-1 Traffic Crash Report.

Single vs. Multiple Vehicle Crashes: Single vehicle crashes involve only one motor vehicle, but may include pedestrians. Multiple vehicle crashes involve two or more motor vehicles and may also include pedestrians.

Speed Related Crash: A traffic crash in which one or more vehicles were reported as exceeding the posted speed limit and/or where the reporting officer indicated that excessive speed for roadway conditions or loss of control was a contributing factor.
