

Stark County Crash Report

2009

Prepared By:
STARK COUNTY AREA TRANSPORTATION STUDY

201 Third Street NE
Suite 201
Canton, Ohio 44702

FINAL

October, 2009

This report is the product of a study financed in part by the U. S. Department of Transportation, Federal Highway Administration, Federal Transit Administration and the Ohio Department of Transportation. The contents of this report reflect the views of the Stark County Area Transportation Study, which is responsible for the facts and the accuracy of the data presented herein. The contents do not necessarily reflect the official views or policy of the U. S. Department of Transportation. This report does not constitute a standard, specification, or regulation.

STARK COUNTY CRASH REPORT

Introduction

One of the primary objectives of the SCATS planning effort is to improve the safety of the existing highway system. To do so, it is necessary to have a means of identifying high crash locations in order to concentrate efforts on these locations.

The purpose of this report is to summarize intersection and intersection-related accidents that occurred in the SCATS area during the years 2006, 2007 and 2008, to identify intersections with high crash rates, and to provide a regional ranking of hazardous intersections. This ranking is based on the number, rate (crashes per million vehicles) and severity of accidents at each intersection.

The report is divided into five sections. Section Two reviews the source of data used, Section Three describes the methodology used to develop the rankings, and Section Four summarizes this analysis. At the end of this report is an appendix which lists all intersections with a history of accidents within the communities by the number of crashes.

Source of Data

SCATS receives an annual listing from the Ohio Department of Public Safety that contains all crashes in Stark County, called TRACTAPE.

TRACTAPE

TRACTAPE is an automated data base containing all accident information for all vehicles involved. Data from intersection and intersection-related accidents is extracted from this data base and assigned to individual intersections.

Coordinating with Other Agencies

Every year, SCATS identifies intersections and accidents to determine whether additional intersections should be added to the listing based on having three or more accidents within a year. SCATS then confers with the County Engineer, ODOT, and the County Sheriff on these intersections to determine the reason for increased accidents. Within cities the city engineers' offices, safety offices and the city police departments are also consulted.

The listing used by SCATS may not always agree with other listings due to differences of definitions and terminology.

Data Used

The following data for arterial and collector streets is included:

1. Total number of crashes in each of the last three years
2. Total number of injury accidents for the last three years
3. Total number of fatal crashes for the last three years

4. Intersection approach volumes
5. Three-year accident rate per million approach vehicles
6. Severity index
7. Composite three-year crash ranking

These data are summarized by political unit, street name and intersecting street.

Methodology

SCATS identifies high crash locations by means of a hazard rating. The hazard rating was developed by the SCATS staff a number of years ago to combine the rates of crashes per year, crashes per million vehicles, and the severity index into one numerical measure. Through trial and error, the following formula was developed:

$$HR = 10 \left(\frac{\text{crash / year}}{15} \times \frac{\text{crash}}{MV} \times SI \right)$$

Where:

- HR = Hazard Rating
- MV = Million Vehicles
- SI = Severity Index

The Severity Index is calculated by multiplying the number of fatal crashes by twelve, the number of injury crashes by three, and the number of property damage only crashes by one. The above products are then summed and divided by the total number of crashes. The severity index value ranges from 1.00 for only property damage crashes to 3.00 or higher if all crashes involve injuries or a fatal crash occurs. The formula looks like this:

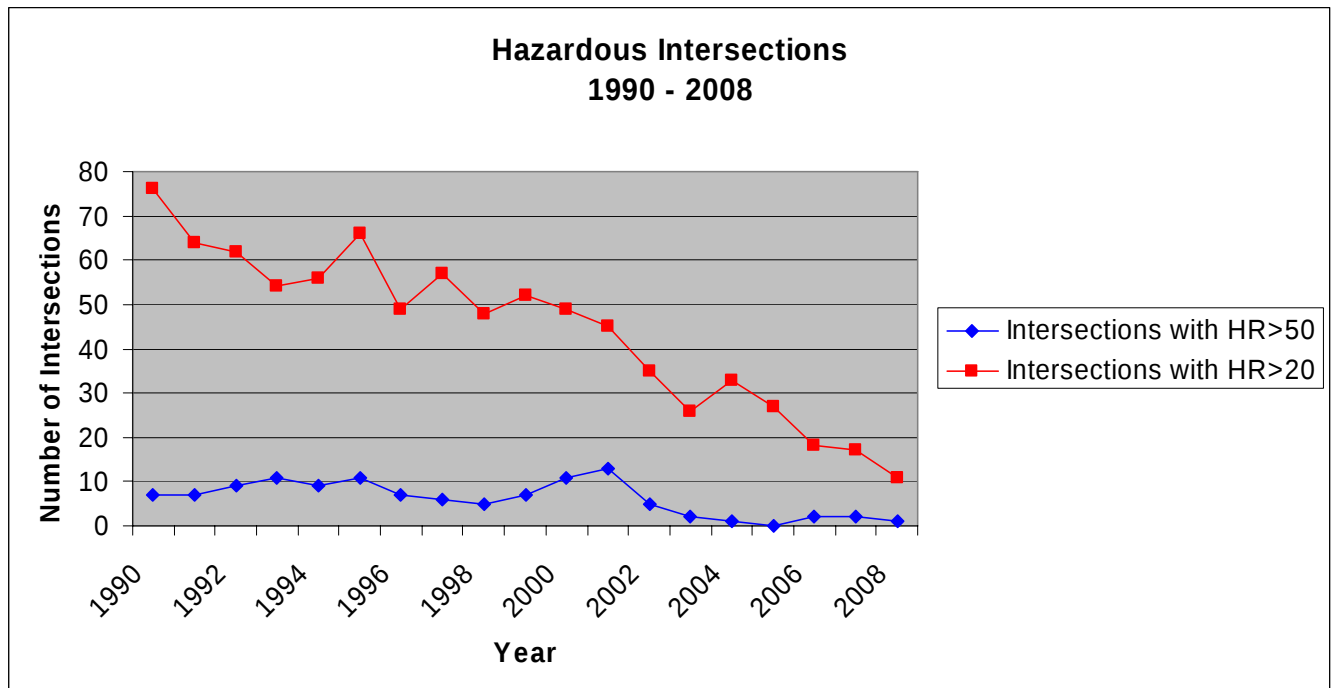

$$SI = \frac{(12 \times FC) + (3 \times IC) + PDC}{FC + IC + PDC}$$

Where:

- FC = Fatal Crashes
- IC = Injury Crashes
- PDC = Property Damage only Crashes

In the Hazard Rating formula, the value of crashes/year is limited to a **range between 0 and 22.5 crashes per year** (In past reporting years a minimum value of crash/year equal to 13.5 was used in the Hazard Rating formula. However, this value often produced a Hazard Rating value that was inconsistent with opinions of agencies responsible for maintaining the intersection. Therefore, the old minimum value of crashes per year was dropped from the hazard rating formula.).

Hazard Ratings range from 0 for locations with no crashes to greater than 100 for locations with high crash rates and high severity indexes. SCATS considers locations with a Hazard Rating of over 20 to be in need of a crash pattern analysis. Locations with a rating over 50 are definite candidates for improvements. In 2001, there were 12 locations with a Hazard Rating greater than 50 and 52 locations with a Hazard Rating greater than 20. In 2008, there was 1 location with a Hazard Rating greater than 50 and 11 locations with a Hazard Rating greater than 20. The following chart shows how the number of hazardous intersections has been declining since 1990.

Miscellaneous Crash Statistics

The following pages provide a variety of statistics related to 2008 Stark County crashes.

Gender of at-fault drivers:

Male: 56.3%

Female: 43.7%

Note: Men account for about 60% of total vehicle travel, and women 40%. (From National Highway Traffic Safety administration)

Miscellaneous Statistics:

Total number of crashes in 2008: 10,756

Number of crashes involving pedestrians: 88

Number of crashes involving bicycles: 62

Number of crashes involving animals: 560

Number of crashes involving excessive speed: 1188

Number of crashes causing injuries: 2794

Number of crashes causing fatalities: 20

Alcohol-Related Accidents:

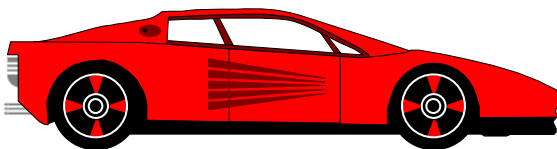

Percentage of crashes where at-fault driver had been drinking: 5.0%

Percentage of crashes where at-fault driver's ability was impaired due to alcohol: 4.6%

Percentage of crashes where at least one driver had been drinking: 5.2%

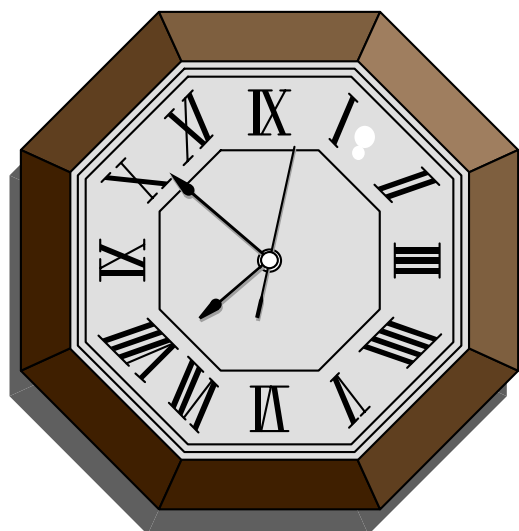

Percentage of injury crashes where alcohol was reported: 9.1%

Percentage of fatal crashes where alcohol was reported: 40.0%

Age Distribution of At-Fault Drivers:

Age Group	Crashes	Percent	*Pct of Total Miles Traveled
<16 years	48	0.5%	>1%
16-24	3099	33.9%	12%
25-34	1548	16.9%	24%
35-44	1364	14.9%	26%
45-54	1256	13.7%	19%
55-64	837	9.1%	10%
65-74	457	5.0%	6%
75-84	398	4.4%	2%
>84	141	1.5%	>1%

Hourly Distribution of Crashes:

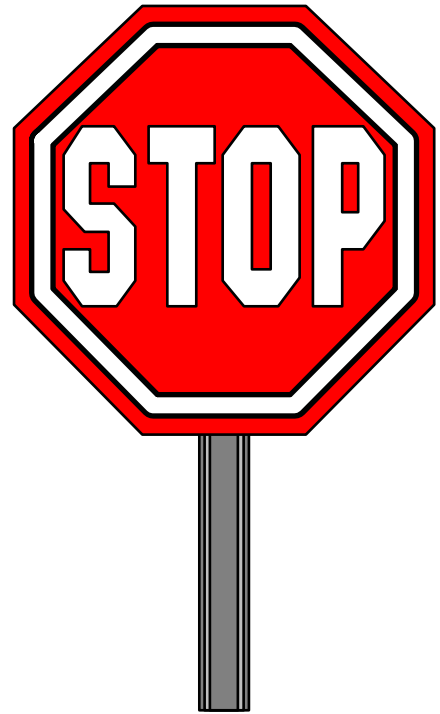

Midnight	251	2.3%

Description of Top-10 Intersections

The following paragraphs describe the situations at the intersections with the top-10 Hazard Ratings, plans (if any) for improvement that are already scheduled, and SCATS recommendations for improvements.

12th Street & Market Avenue North – This is a signalized crossroad in the City of Canton. This is a very high-volume intersection. Market Ave is a four-lane road with one through-right lane and one through-left lane in each direction. 12th St has one left-turn lane and one through lane westbound, and one through lane, one left-turn lane, and one right-turn lane eastbound. The strange lane configurations may be causing some of the crashes at this location. A car going straight on Market Ave could get stuck behind a car turning left and try a dangerous lane change.

Hazard Rating	Crashes per year			Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2006	2007	2008					
71.08	25	24	18	24	0	21,985	2.78	1.72

Fatalities: 0

Leading Cause(s): Failure to yield

Recent Improvements: None

Current Plans: A safety study was completed on this intersection which recommended the addition of left-turn lanes on Market Ave. Construction is planned for 2012.

Recommendation: Proceed with current plans.

13th Street & I-77 Ramps at Mercy Hospital – This is a signalized intersection on the east side of I-77 at 13th Street NW in the City of Canton. The configuration of this intersection is unusual. The south leg is the exit ramp from I-77 northbound. The east and west legs are 13th Street. The north leg is both the entrance ramp to I-77 and the main entrance to Timken-Mercy Medical Center. Signal timing and lane use at this intersection is unusual and probably contributes to the crash rate especially since hospitals attract many drivers unfamiliar with the area.

Hazard Rating	Crashes per year			Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2006	2007	2008					
40.83	16	21	12	17	0	20,200	2.21	1.69

Fatalities: 0

Leading Cause(s): Failure to yield

Recent Improvements: This intersection underwent construction in 2007.

Current Plans: None

Recommendation: The construction at this intersection in 2007 may have contributed to the crashes here.

30th St NE & Harrisburg Ave— This is a four-way intersection of a county road, a township road, and a ramp to US-62. There are stop signs on 30th St. The ramp from US-62 to Harrisburg southbound has a right-turn lane with a yield sign and a through-lane with a stop sign. Harrisburg has left-turn lanes in both directions. Cars on 30th St have trouble seeing to the south.

Hazard Rating	Crashes per year			Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2006	2007	2008					
38.49	14	11	8	11	1	11,475	2.62	2.00

Fatalities: 0

Primary Cause(s): Failure to yield, Ran Stop Sign

Recent Improvements: A safety project along US-62 to upgrade the signals into a closed-loop system was completed in 2005.

Current Plans: This intersection is currently being studied. Any recommendations from the study will be incorporated into a US-62 project in the near future.

Recommendation: Proceed with current plans.

Dueber Ave & Navarre Rd – This is a signalized intersection of two city streets. There are left turn lanes on all four legs. Access to businesses at the four corners of the intersection may cause some confusion here.

Hazard Rating	Crashes per year			Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2006	2007	2008					
37.54	12	9	9	14	0	9,400	2.91	1.93

Fatalities: 0

Leading Cause(s): Ran red light

Recent Improvements: None

Current Plans: The traffic signals are scheduled to be upgraded in 2011

Recommendation: Proceed with current plans.

US-62 & Harmont Ave & Lesh St — This is an intersection of a four-lane US route and a two-lane county route. Because Lesh St intersects so closely to the main intersection, it has been included as part of this intersection. US-62 has both left-turn-only and right-turn-only lanes in both directions.

Hazard Rating	Crashes per year			Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2006	2007	2008					
36.08	16	22	18	17	1	31,795	1.61	1.80

Fatalities: 0

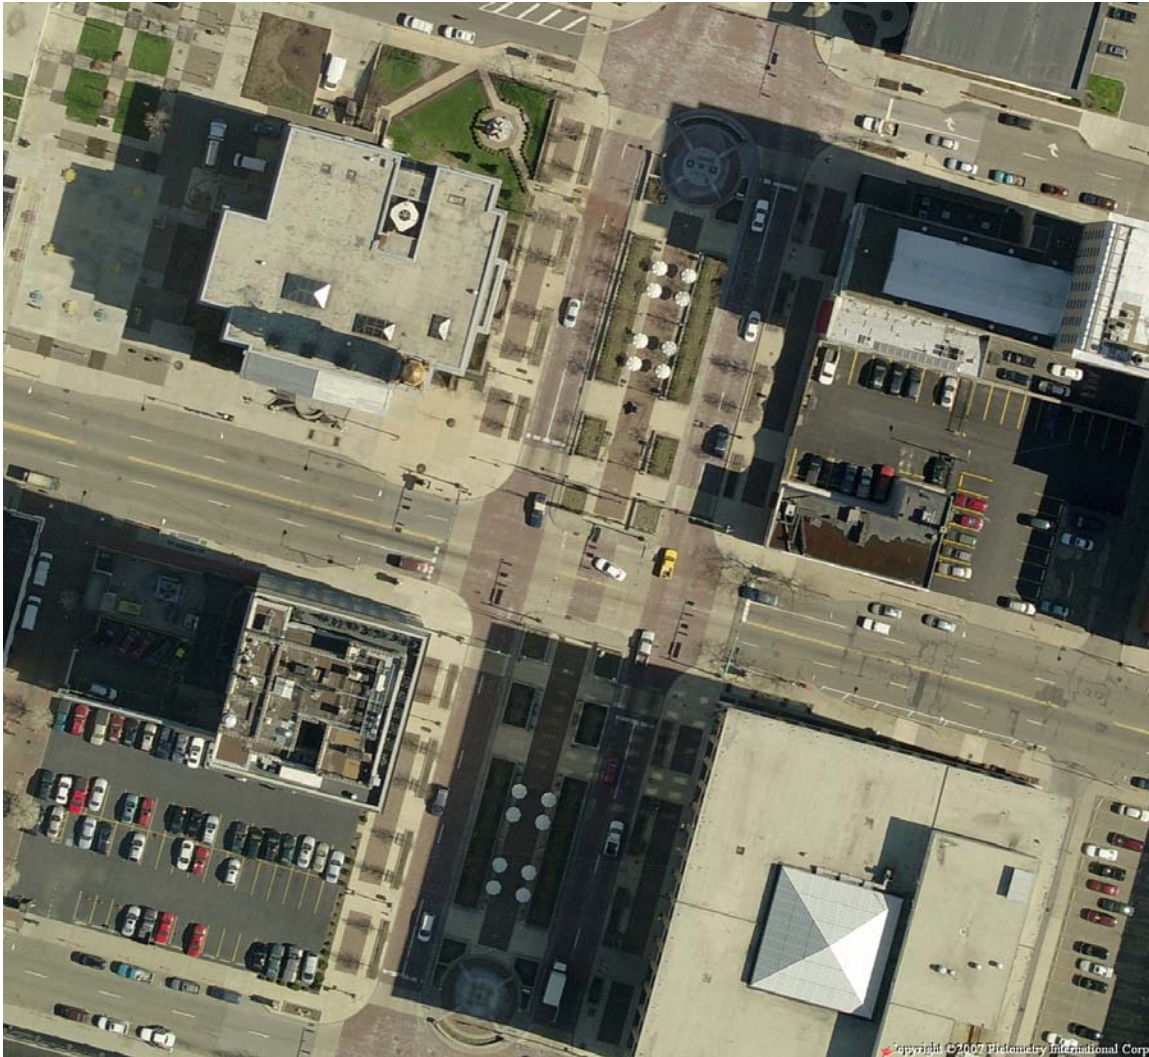

Leading Cause(s): Followed too closely

Recent Improvements: The right-turn lanes were added to US-62 and the left-turn lanes on US-62 were offset in 2005.

Current Plans: This intersection is being studied as part of a US-62 corridor study from SR-43 to SR-44. An interchange is in SCATS' Long Range Plan.

Recommendation: Proceed with current plans.

Tuscarawas St (SR-172) & Central Plaza – This is an intersection of a state route and a very busy city street. Central Plaza is also known as Market Avenue. Both streets are four lanes. Central Plaza is divided by a large median, so technically, this is two intersections. The intersection is controlled by two sets of traffic lights. Parking is permitted on all four legs of the intersection.

Hazard Rating	Crashes per year			Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2006	2007	2008					
27.58	9	17	18	14	0	23,295	1.72	1.64

Fatalities: 0

Leading Cause(s): Ran red light

Recent Improvements: In 2007 and 2008 the intersection was improved as part of a project to widen Tuscarawas St to five lanes, improve the traffic signals, and improve the lighting.

Current Plans: None

Recommendation: The increase in crashes in 2007 and 2008 may have been due to the construction. Nothing is recommended at this time.

Everhard Rd & Whipple Ave – This is an intersection of two county roads controlled by traffic lights. Each leg has a left-turn lane. The north and south legs also have right-turn lanes. An exit ramp from I-77 complicates this intersection.

Hazard Rating	Crashes per year			Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2006	2007	2008					
23.02	18	22	17	19	0	47,700	1.09	1.67

Fatalities: 0

Leading Cause(s): Failure to yield

Recent Improvements: The I-77 bridge over Whipple Ave was upgraded as part of the I-77 construction in 2006.

Current Plans: The traffic signals will be replaced next year. The county has plans to upgrade this entire area to at least five lanes in five or six years. The turn lanes would probably be lengthened as part of this project.

Recommendation: Proceed with current plans.

13th St NW & Harrison Ave — This is an intersection of a four-lane city street and a one-way on/off ramp. It is controlled by traffic signals. The north leg has separate left, right, and through lanes.

Hazard Rating	Crashes per year			Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2006	2007	2008					
22.59	14	20	7	12	0	23,925	1.56	1.59

Fatalities: 0

Leading Cause(s): Failure to yield, ran red light

Recent Improvements: This intersection underwent construction in 2007.

Current Plans: None

Recommendation: There was a spike of crashes in 2007, probably caused by construction. There are no recommendations at this time.

Georgetown St & Paris Ave – This is an intersection of two county roads controlled by stop signs on Georgetown St and flashing lights.

Hazard Rating	Crashes per year			Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2006	2007	2008					
29.32	4	5	0	8	0	2,085	3.94	2.78

Fatalities: 0

Leading Cause(s): Failure to yield

Recent Improvements: The flashing lights were installed in 2005.

Current Plans: None

Recommendation: Initially, crashes dropped after the flasher was installed in 2005. It is somewhat mysterious that crashes rose in 2006 and 2007. No crashes were reported in 2008, so the crashes in 2006 and 2007 may be an aberration.

I-77, Belden Village St & Whipple Ave – This is an intersection of an interstate highway ramp and two five-lane county roads. It is controlled by traffic signals. It is one of the busiest intersections in the county.

Hazard Rating	Crashes per year			Injury Crashes	Fatal Crashes	ADT	Crash Rate	Severity Index
	2006	2007	2008					
21.52	23	13	15	17	0	40,850	1.14	1.67

Fatalities: 0

Leading Cause(s): Failure to yield

Recent Improvements: The I-77 bridge over Whipple Ave was upgraded as part of the construction on I-77 in 2006.

Current Plans: The traffic signals will be replaced next year.

Recommendation: The 23 crashes in 2006 may have been due to the construction on I-77 at that time. Southbound left turns were temporarily allowed. Nothing else is recommended at this time.

Glossary of Terms

Alcohol Related Crash: A crash in which a vehicle driver or pedestrian had been drinking

At Fault: A term that identifies the person, animal, or condition that was the primary cause of a vehicle crash.

Blood Alcohol Concentration (BAC): The level of alcohol in a person's bloodstream. In Ohio, the legal limit of .10 equals a blood alcohol concentration of one part per thousand.

Child Safety Seat: Safety devices designed to fit in motor vehicles that keep children securely in place. The law requires the seats for children weighing less than 40 pounds or who are less than four years old.

Crash: An occurrence involving a moving motor vehicle, which produces bodily injury or property damage. Crashes are generally caused by driver error, a defect in the vehicle or in the road pavement. It occurs on a road, or after the motor vehicle runs off the road, but before events are stabilized.

Drinking Driver or Pedestrian: A person identified as one who had been drinking at the time of the crash regardless of the level of impairment.

Driver: Any person of any age operating a vehicle, including non-motorized vehicles.

Economic Loss: An estimate of the cost of traffic crashes. Cost estimates for crashes and injuries of various severity are based upon lost wages, medical costs, and vehicle repair costs. These estimates are established from national statistics.

Fatality vs. Fatal Crash: A fatality is a death that results from a traffic crash. A fatal crash is a motor vehicle crash (single or multiple) that results in the death of one or more people. A fatal crash can cause one or more fatalities.

Injury (motor vehicle related): The reporting officer classifies Personal injuries as follows:

1. **Fatality** – an injury that results in death within 30 days after the date of the crash.
2. **Serious visible injury** – An injury other than a fatality that prevents the injured person from continuing the normal activities he/she was capable of performing prior to the crash.

3. **Minor visible injury** – An injury, other than a fatality or serious injury, which is evident to the observer at the crash scene.

4. **No visible injury** – An injury that is not evident to the observer, but is claimed by the person, or suspected because of behavior.

Moped: A pedacycle that has a motor.

Motorcycle: A motorized two- or three-wheeled vehicle with more than five brake horsepower.

Motor Vehicle: Any self-propelled vehicle that does not run on rails. Examples include, but are not limited to, automobiles, trucks, tractor-trailers, and motorcycles.

Occupant Restraints: Devices for the protection of vehicle occupants found in motor vehicles which keep the driver and passengers in their seats and prevent them from being ejected from the motor vehicle upon impact. Restraint devices include lap belts, lap/shoulder harness combinations, and air bags.

Property Damage Crash: A traffic crash that results in no injuries or fatalities. Ohio law requires that all crashes resulting in more than \$150 in damage be reported to the Ohio Department of Highway Safety on the OH-1 Traffic Crash Report.

Rural Area: An incorporated or unincorporated area with a population less than 2,500.

Single vs. Multiple Vehicle Crashes: Single vehicle crashes involve only one motor vehicle, but may include pedestrians. Multiple vehicle crashes involve two or more motor vehicles and may also include pedestrians.

Speed Related Crash: A traffic crash in which one or more vehicles were reported as exceeding the posted speed limit and/or where the reporting officer indicated that excessive speed for roadway conditions or loss of control was a contributing factor.

Urban Area: An area that is incorporated, usually a city with a population of 2,500 or more people.

Youthful Driver: A driver is considered a youthful driver if his or her age at the time of the crash was between 16 and 24, inclusive.
